

# Worry-Free

***New Worry-Free Plug-In Carbon Monoxide Alarms Offer Peace of Mind with 24/7 Protection for 10 Years***

## **Product Description**

[Kidde's](#) Worry-Free Plug-In Carbon Monoxide (CO) alarms simply plug into any outlet to offer nonstop warning of this odorless, invisible gas. Each contains a CO sensor proven to last 10 years – the longest life available as well as a lithium battery built into the device to provide continuous backup power for a decade, eliminating the need for battery replacement and low-battery chirps. To help simplify choosing the right alarms for their home, each model highlights a different location: the living area, bedroom and hallway. The bedroom model contains a voice warning in addition to the traditional beeping sound; the hallway model contains a combination nightlight and escape light. The nightlight will automatically activate during low light conditions while the higher intensity escape light offers exit assistance when in alarm situations.

## **Why CO Alarms Are Needed?**

The [Centers for Disease Control and Prevention](#) states carbon monoxide is the leading cause of accidental poisoning deaths in the U.S., claiming more than 400 lives each year. In addition, more than 20,000 people visit the emergency room and more than 4,000 are hospitalized due to accidental CO poisoning annually. CO is produced anytime fuel is burned, and two-thirds of Americans use gas, wood, kerosene, or another fuel source to heat their homes – but only 50 percent have working CO alarms in their homes. The only safe way to detect CO is with a working alarm. Experts recommend installing one on each floor and near sleeping areas.

## **Key Benefits**

- **Goodbye late night low battery chirps:** The lithium battery is sealed inside the unit, tamper proof and proven to last 10 years, meaning no low battery chirps or battery replacement
- **Longest Sensor Life Available:** Carbon monoxide sensor is proven effective for 10 years – nearly twice as long as some models
- **Money Savings:** Save up to \$40 in battery costs over the life of each alarm
- **Quick and Easy Installation:** Simply remove activation tab and plug in to standard AC outlet
- **Always On:** 24 hour/day, 7 day/week protection from CO
- **End of Life Hush Button:** 10 years after initializing power, the alarm will sound a warning to indicate it needs replacing. The test button will temporarily silence that warning for up to three days.
